## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-16 and 18-32, drawn to a ceramic catalyst body, classified in class 502, subclass 240.
  - II. Claim 17, drawn to a method of producing a ceramic catalyst body, classified in class 502, subclass 240.
  - III. Claims 33-41, drawn to a method of regenerating a ceramic a ceramic catalyst body, classified in class 502, subclass 20.

The inventions are distinct, each from the other because of the following reasons:

2. Invention groups I and II are related as process of making (Gr. II) and product made (Gr.I). The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)).

In the instant case the product can be made by a different process such as by coprecipitation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

Art Unit: 1754

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the regenerating may be performed by a different method than the claimed method. The subcombination has separate utility such as to be useful in the regenerating of other than the claimed catalyst.

4. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions, as the process of making the catalyst cannot be used in the regeneration of the catalyst.

5. A telephone call was made to David G. Posz on 01/02/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
